Total volumes sourced in 2019: 455 000 tons

Notes:

As with any traceability efforts, this is a snapshot that reflects our supply chain-mapping efforts over the last year, representing volumes procured in the year leading up to April 2019, which is a mix of self-declaration and paper based verification, and should not be taken as fully exhaustive nor fully accurate as supply chain flows evolve on a daily basis. To the best of our knowledge, the information contained in this list is accurate and reliable as of the date of publication; however, we do not assume any liability whatsoever for the accuracy and completeness of this information. Therefore no rights can be derived from this list.

Several mills on the list have since been suspended or otherwise removed since. As this is a snapshot dating from April 2019, these removals may not be reflected in this document. We have received confirmation for the rows appearing struck out that these suspended suppliers column are no longer in our supply chain, though they did appear during the time period used for this traceability exercise

The mills association with Tier 1 suppliers does not indicate ownership of the mills by that Tier 1 supplier. The mill owner is indicated by the "Mill Company Name". The Tier 1 supplier relationship to the mill is through direct or indirect sourcing, except in the cases where the Mill Company Name is the same as the Supplier name.
